2.4 KABUKI G2 Curtain Drop System

2.4 KABUKI G2 Curtain Drop System

Reliability You Except From Gerriets

The Gerriets KABUKI system will drop virtually any type of stage curtain or event fabric in a fraction of a second. Durability and reliability, time after time, has always been the Gerriets KABUKI system standard.

A New Generation of High Performance

The newly developed, electronically controlled KABUKI G2 system allows load ratings up to 50 kg per release unit. That means 100% higher load ratings than previous systems - a unique feature for a KABUKI system (picture 1).

In June 2007 the KABUKI G2 with G-FRAME 54 Control System was awarded "Best Product" in the "Event Technology and Service" category at ShowTech in Berlin, Germany.

The International Design Award from the State of Baden Wuerttemberg awards innovative, professional and outstanding design concepts. The G-Frame 54 Control Unit's product safety and product functionality are extremely well designed.

Components of the System

The KABUKI G2 system includes the KABUKI release units with a 2 m XLR jumper cable and the G-Frame 54 control unit including a 120/230 VAC grounded power cord.

Innovative New Features

Quick and easy installation is just one on the many advantages to the new KABUKI G2 system.

Mounting / Installation

The system offers several attachment possibilities to accommodate almost any application:

- Attachment to release units via Carabiners, Zip ties, Spannfix, Shackles or Tie lines.
- By turning the release unit 90°, a banner with a small diameter flexible tube sewn into a top hem can be mounted. (picture 2).
- The optionally available fabric clamp (picture 3) allows the mounting of textiles without eyelets or grommets.
- The high performance release unit allows the attachment of tensioned, stretch materials due to its high load capacity. The release effect works reliably at a touch of a button.

Operational Features

The system is designed with a double-check function that verifies that the system is functioning properly.

A specially developed end plug gives feedback to the control unit that all cables are properly attached and working.

A green signal light is activated when all channels are properly connected.

A red signal light is activated if there is a problem.

In case of power failure, the release units remain locked.

3 Fabric Clamp

2.4 KABUKI G2 Curtain Drop System

Simple and Flexible

The KABUKI release unit can mount quickly and easily to a variety of pipe/truss diameters via two different clamps. For load ratings up to 10 kg per unit, the standard hook clamp is recommended. For load ratings exceeding 10 kg, we recommend our HD Doughty HD Trigger Clamp.

Each release unit can change position easily. There is no need to reposition the curtain or add eyelets/grommets to an existing curtain.

The Gerriets KABUKI G2 system will work with virtually any type of curtain or event fabric and is easily expandable when necessary.

The system is ideal for touring productions due to its durable construction and reliable operation.

Award Winning Design: G-FRAME 54 KABUKI G2-Control System

G-FRAME 54 KABUKI G2 control system has an elegant, simple design that translates into its new features (pictures 1).

An innovative chassis allows the control unit to have three different installation options.

- Horizontal mounting for stand-alone applications (picture 1).
- Vertical mounting for wall mount applications (picture 2).
- 19" Standard rack mount applications (not shown).

Control System Options

Control of the system via DMX or manual mode.

Multiple control units can be connected together.

Remote triggering of the system is possible via an optional remote trigger button.

Releasing of a predefined group of release units is possible.

Chassis design allows stacking of the control cabinets with no fear of thermal overload.

Chasssis design protects XLR plugs from being disengaged.

Recessed fire button prevents accidental release of the system.

Durable and light-weight 1,5 mm Aluminum release unit housing.

Stand-off housing profile on all sides of the control unit aides a variety of operational features.
